

SecureUSA Releases New All Electric Counter Terrorism Vehicle Barrier

SecureUSA announced that their new all electric vehicle barrier successfully passed ASTM 50 crash certification

SecureUSA, a leading provider of perimeter defense solutions, announced today that the newest addition to their all electric vehicle barrier range, the FutureWEDGE™ 3600S has passed ASTM M50 crash certification. The FutureWEDGE™ 3600S is the only super shallow (9 inch/228 mm depth), flush mounted all electric vehicle barrier to meet the ASTM M50 rating. The wedge plate barrier is designed to provide final denial security for roadways, entrances and access control points (ACP) from vehicle intrusion.

The FutureWEDGE™ 3600S is a heavy duty vehicle barrier that has now been crash certified to immobilize a 15,000 lbs. (6,800 kg) vehicle traveling at 50 mph (80.5 kph). The new vehicle barrier is designed for industrial and high security applications such as military bases, ports of entry, petrochemical sites, nuclear sites, energy plants and data centers. The ASTM M50 certification offers one of the highest ratings possible for a vehicle barrier in its class.

The latest FutureWEDGE™ features a unique double drive electric actuator system and is a pollution free, environmentally preferable product over traditional hydraulic systems. The vehicle barrier was also built with extensive integration capabilities as a key design element. The new capabilities allow the FutureWEDGE™ control system to be easily integrated with other onsite security elements such as gate arms, over-speed detection, wrong way detection and other Access Control Point (ACP) requirements. For site security standards the FutureWEDGE™ 3600S is a “first in class” vehicle barrier that will allow for complete vehicle entry and exit security as well as traffic control management.

About SecureUSA

SecureUSA, Inc. is a leading provider of perimeter defense solutions in North America. SecureUSA's capabilities include the manufacture of unique electrically operated “green” vehicle barriers, integration of perimeter defense design build projects, project management, installation and maintenance services. SecureUSA's commitment is to provide its customers with the look they want and the security they need, protecting facilities against asset loss or damage.
